LABORATORY-4: Dynamic Memory in C
Programming

LABORATORY 4

Task	Statement	Explanation
3	Asks the name, the surname and then concatenates them	String functions with dynamic memory allocation

Task 3 – Write C program that asks the name, the surname and then concatenates them. Please use malloc and put blank between name and surname (strcat can be used for a blank).

Instructions for submission

- For each task, separate assignment will be opened, and students should upload the their tasks to related assignment sections.
- Each c files must have specific name format as “id_TASK-n_main.c”. id is the student number. If your digit number of the student number lower than 12 please add zero to left side of your student number until reaching 12 digits.
- In the main c file, if you define functions, you should create separate c files for these functions, and you should give name them as “id_TASK-1_func1.c”. Similarly, id is the student number and fucn1 is the function name which we will give the name of it if you need to use function.

As note: The example naming is given in Fig.-1 for this student: id=000011111111 and has main function, and having func1 in the main function which is also submitted with separate c files.
